TYPE III RO WATER PURIFICATION SYSTEM BFN-11601

RO WATER PURIFICATION SYSTEM

Intelligent microprocessor control.
High precision resistance sensor.
A large LCD display shows system temperature, conductivity and resistivity, water tank level, water ration and other operation information.
Automatic RO membrane rinse and flow limitation design improve cleaning result and extend RO membrane's lifespan.
These reservoirs are designed with smooth sides and vented filtration to maintain consistent purity of stored water and provide effective protection against airborne contaminants.
